### I. QUESTION(1.12)

A coin is biased so that the head is 3 times as likely to occur as tail.if the coin is tossed twice,find the probability distribution of number of tails.

### II. SOLUTION

Given that the coin is biased.when coin is tossed once then Probability of occurrence of Head is = 3 times the occurrence of tail i.e

$$P(H) = 3P(T) \quad (1)$$

when the coin is tossed twice then the possible outcomes are  $HH, HT, TH, TT$ .  
as the coin is biased

$$P(H) = \frac{3}{4}$$

$$P(T) = \frac{1}{4}$$

$X = 0$  represents no tails i.e both are heads

$X = 1$  represents 1 tail and other is head

$X = 2$  represents 2 tails and no heads

Let  $X$  represents number of Tails and  $P(X)$  represents the distribution of  $X$  which can be expressed as

$X$	0	1	2
$P(X)$	$\frac{3}{4} \times \frac{3}{4}$	$\frac{3}{4} \times \frac{1}{4}$	$\frac{1}{4} \times \frac{1}{4}$

### III. CONCLUSION

Probability Distribution of Number of Tails is obtained as below.
